Clear signals for quick choices

Tonon's solution colours are not just for the sake of appearance.

We mean it when we say it should be easy.

That's why we have developed our system so you can be sure your employees can work as efficiently as possible in your storage facility.

They can decipher colours much faster and with greater certainty than verbal agreements or written instructions.

There are countless options for what the individual colours must symbolise: you decide depending on which needs you have to meet.

Disorder and confusion are some of the greatest causes of error. At best, this wastes lots of time and at worst it causes outright errors.

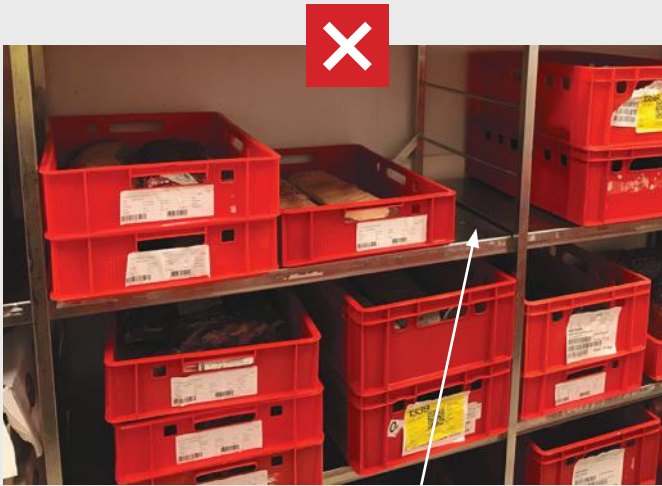

Examples of product classifications

Green shelves

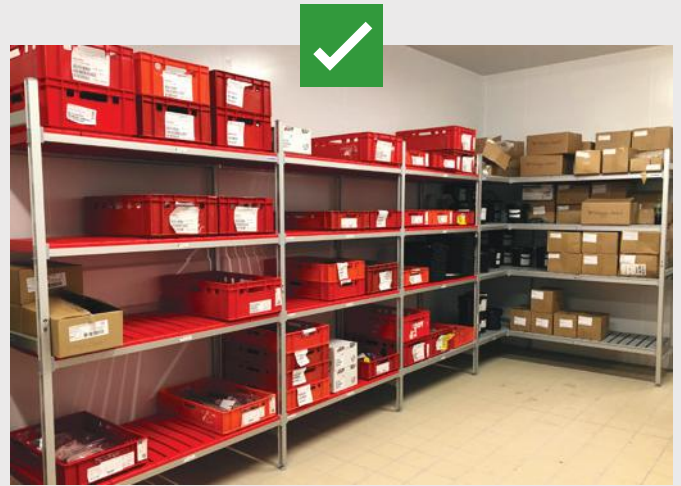

- Vegetables
- Customer-ordered products
- Ready for launch starting next week
- Staff shelf

Red shelves

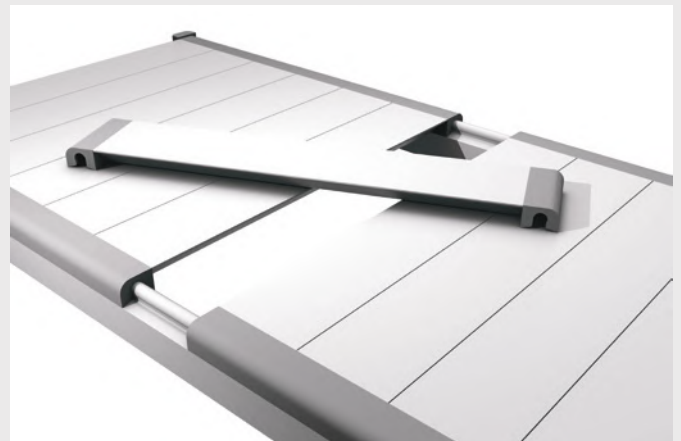

- Meats
- Products with critical shelf-life
- Current bargains
- Particularly sensitive

Ideal utilisation of the storage facility

Perfect

As everyone knows, ISO is a key concept within all types of logistics and inventory management. This is also why Tonon bases its design line on ISO standards.

Even if we take pride in presenting products that look good, it would be pointless for us not to be guided by ISO standards. This is the only way we can be sure that your storage facility will be utilised to the full.

This is why all our solutions can be adapted to 40 x 60 cm, for example, which is a focal point in any storage facility.

Similarly we have taken into account that in some places space needs to be optimised for dishwasher trays of 50 x 50 cm.

But here, too, we have incorporated design as an important parameter to make sure you get the best solution.

This means we have been able to create a “black line” in which all aluminium components come in an elegant black colour without compromising anodisation quality as a result.

In addition, we have created a number of different options for the type of slats you prefer for your solution. In addition to the different colours, we can also offer aluminium slats that are particularly useful for critical items.

Overview is contagious

**Logistics research long ago proved what everyone knows deep down:
Disorder and confusion in a storage facility ultimately end up at the customer as well.**

Now and always, we focus on ensuring that our solutions lay the groundwork for ensuring that reliable systems can be upheld and enlarged to serve your customers in the best possible way.

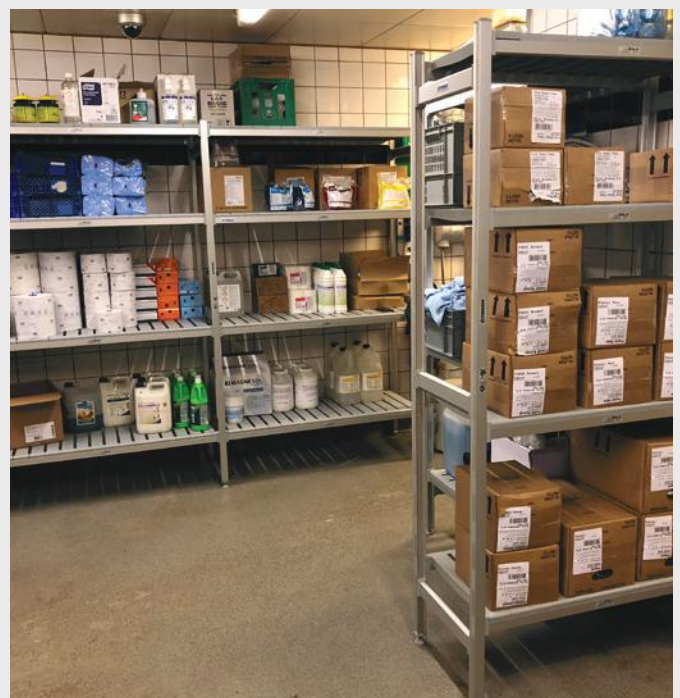

If, in response to a customer inquiry, an employee is uncertain about whether he or she has thoroughly searched for something, this is contagious. Customers can clearly feel the uncertainty if your employees always have to guess where individual items are located.

A warehouse without uncertainty. A warehouse where everything is in its right place and where it is easy to keep it this way. That is our aim. And this is also what a properly used Tonon solution will give you.

Not only satisfied employees, but what is ultimately more important: Satisfied customers.

Before

After

Safe to go
to work

We have thought of everything

- 1 No corner posts to impede access to products
- 2 All joints are concealed so there are no screws or other fittings to get caught or cut on
- 3 Both aluminium and plastic slats are devoid of sharp edges
- 4 As none of our materials can rust, they cannot develop hazardous burrs or peeling
- 5 Our slats prevent packaging from freezing to the shelf and thus being ruined and posing a handling risk
- 6 Specification of load-bearing capacity on every single shelf protects against overloading
- 7 End units prevent products from sliding out and can function as information boards at the same time

A reliable choice

Food storage and processing requirements are comprehensive and increasing – and inspection visits can be costly if you do not meet them.

All Tonon products meet all requirements as we have the highest food grade classification.

When deciding which materials to use, we take account of all parameters, including your customers' safety, of course.

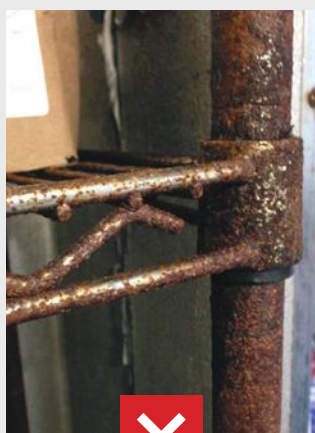

A Tonon solution will ensure that your products are not smudged or affected by peeling. Similarly, your products are also protected against the formation of rust which could ruin your products.

By focusing on making it easy to handle products in the storage facility, we minimise the risk that handling and placement can damage products and thus impair their quality.

In this respect, our unique colour coding can also ensure that best-before dates are easy to work with while the products are still in the warehouse.

FOOD GRADE means that foods must be stored direct in our shelving systems without being wrapped in packaging.

Room for more

Tonon has always viewed putting its customers first as its principal task.

We are the ones who must adapt our solutions to your needs – not vice versa.

This also enables us to optimise your storage facility within a unique tolerance of just three centimetres, which is the equivalent of the white bottom margin on these pages. We know that wasted space costs money.

In addition, we have a wide range of options to choose for designing and furnishing your specific storage facility.

Tailored to meet your needs

By choosing a Tonon solution, you also choose to put your needs first.

Tonon is characterised by providing prompt, direct contact between you and us. We measure your dimensions, and we discuss any preferences you might have, taking account of any physical limitations in the form of posts, access conditions and similar.

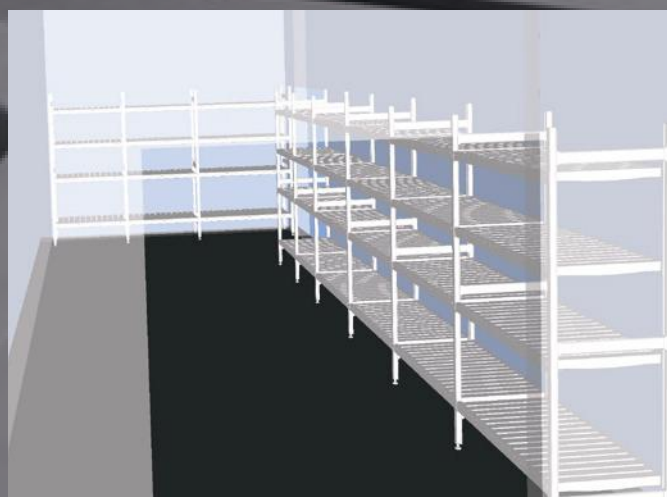

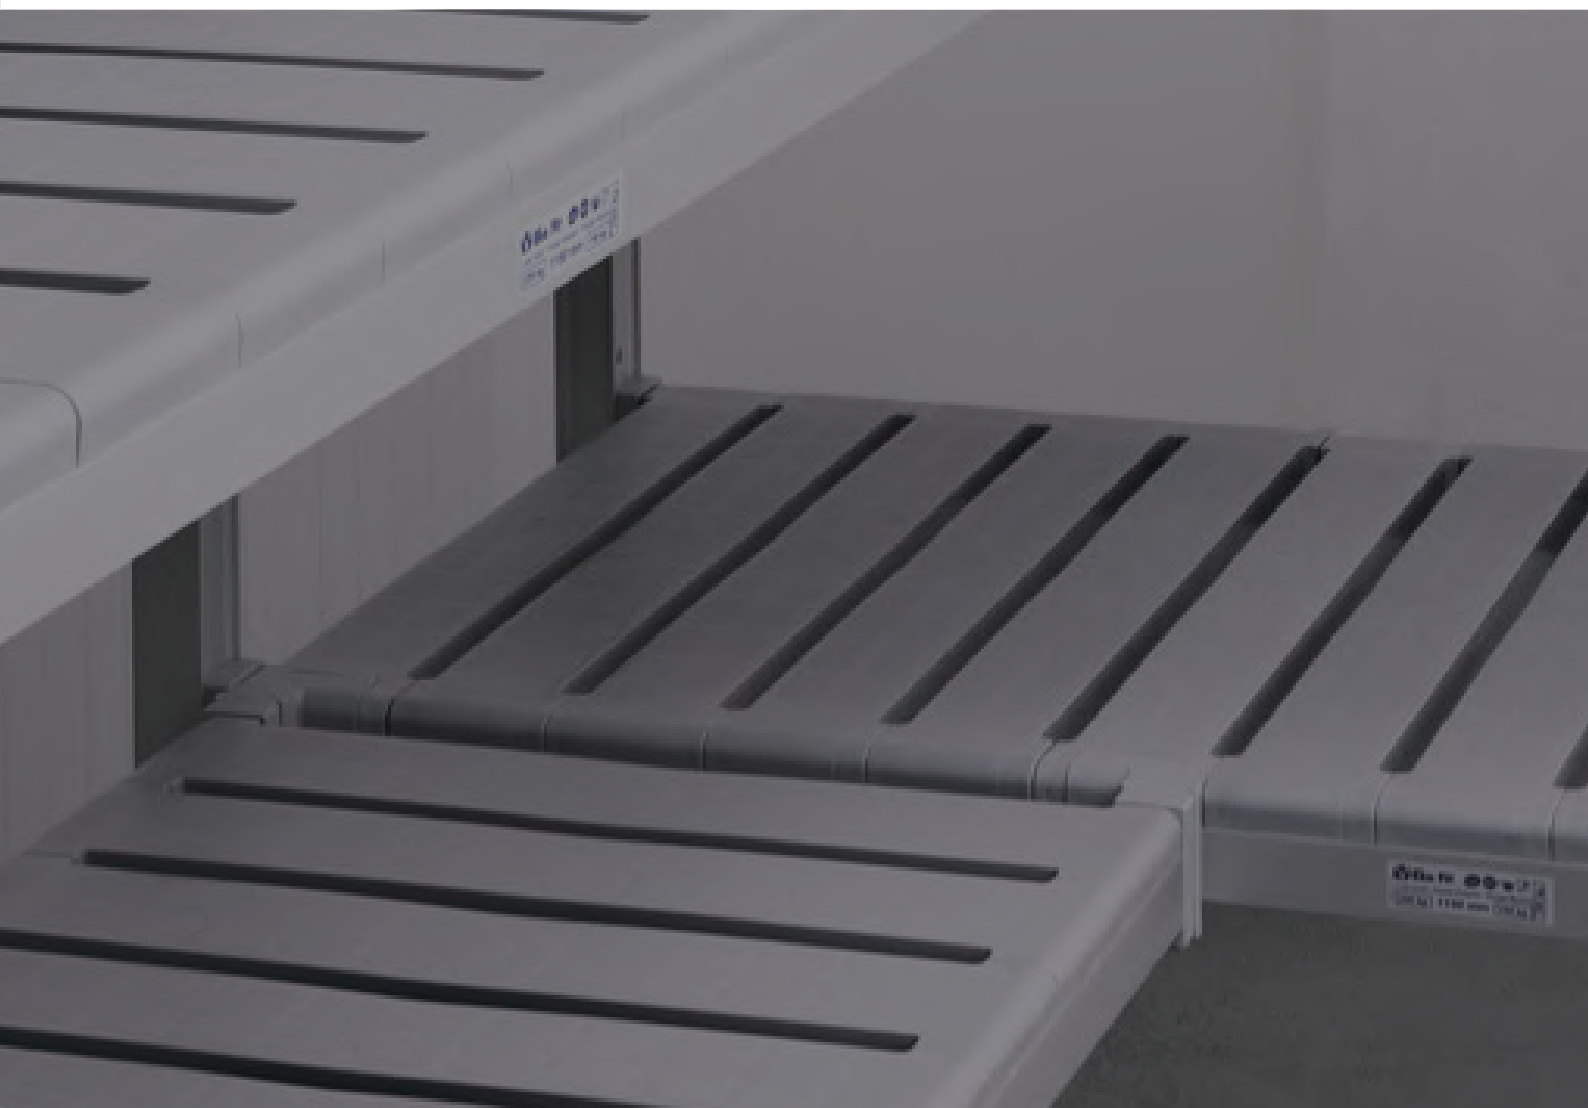

Next, we present you with a 3D drawing of your specific storage facility and the solution we have jointly arrived at as the best for your situation.

Finally, we also take care of installing your solution on your premises.

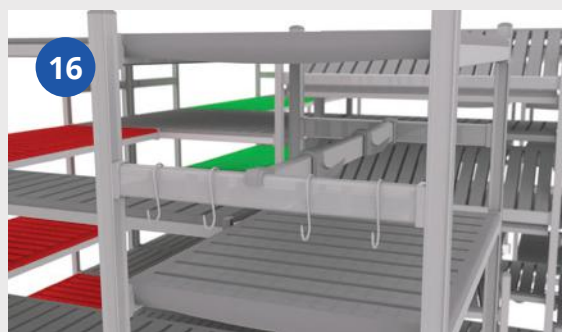

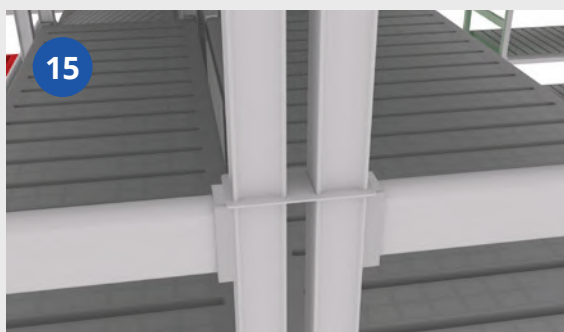

It should be just as easy to do business with Tonon as it is for your employees to use our system.

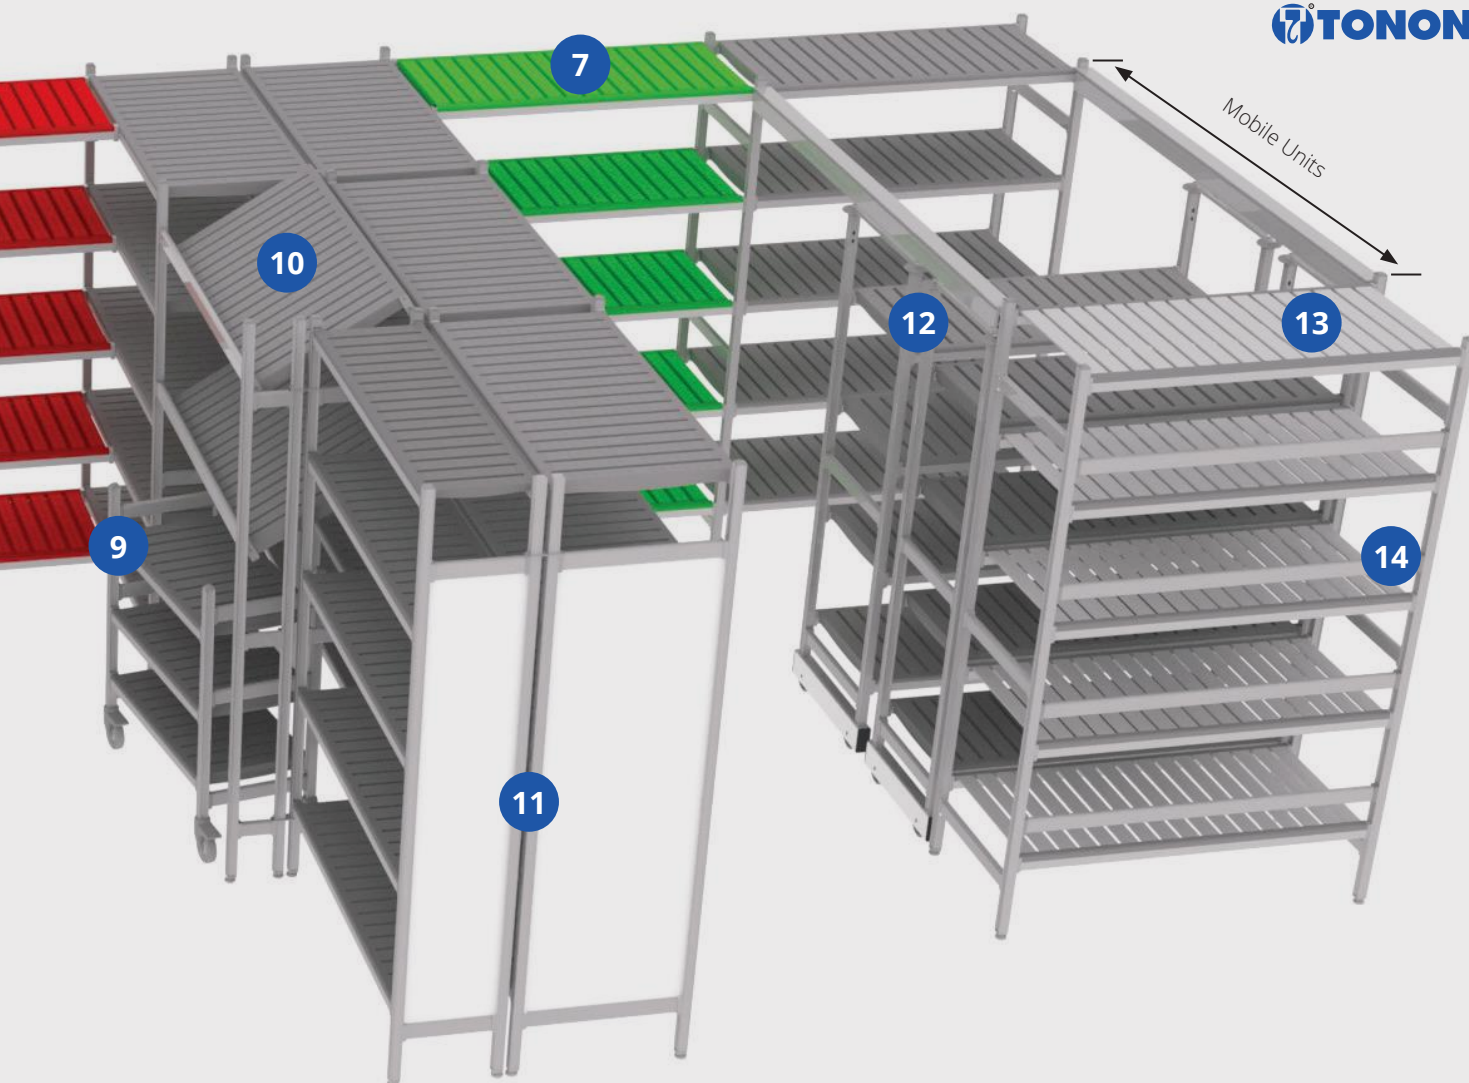

From 3D drawing to finished result

From 3D drawing to finished result

- 1** Mobile shelving system (HD), Floor Rail
- 2** Aluminium slats (solid)
- 3** Edge protection (light)
- 4** Roller cart, H: 1800 mm, load bearing capacity: 250 kg
- 5** Shelving section for boxes, trays and canteens
- 6** Corner joint for all depths
- 7** Colour-coded PE-HD slats
- 8** Shelf bench
- 9** Roller cart, H: 1050 mm, load bearing capacity: 125 kg
- 10** Display shelves
- 11** End section with side panel
- 12** Mobile shelving system (HD), Top Rail
- 13** Aluminium slats (vented)
- 14** Edge protection (solid)
- 15** Assembly fittings for detached end units
- 16** Wide selection of hooks
- 17** Wall shelves
- 18** Omega fittings for wall attachment

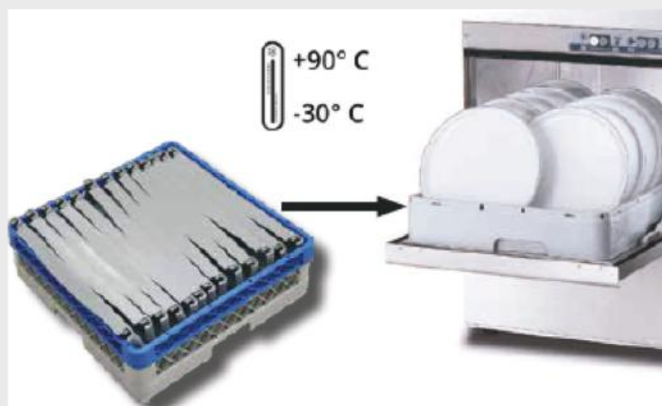

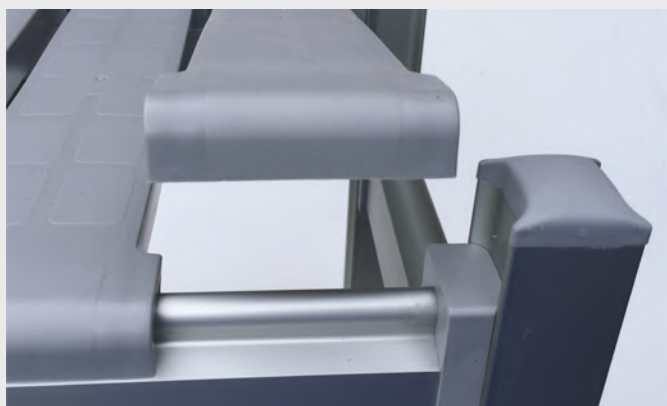

Easy to clean

Without effective cleaning, it is impossible to exploit a storage facility to the full. This is why Tonon has also incorporated this factor into its solutions.

A 26-cm clearance below all bottom shelves makes the entire floor accessible.

No sharp edges or visible joints where tools can get damaged or caught.

All slats can be quickly removed and put in the dishwasher as this unique plastic material can withstand temperatures from -30 to +90 degrees Celsius.

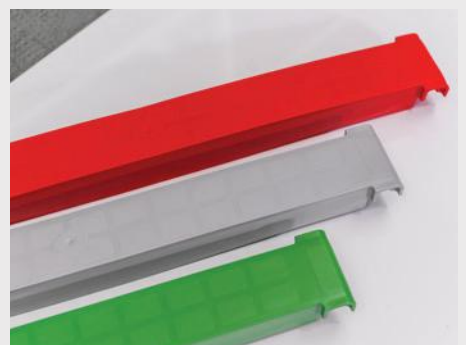

No more waste

Eliminating waste is the key to ideal utilisation of a storage facility. Reducing wasted time and products will significantly enhance your bottom line.

This also explains why waste management is a key concept for Tonon and how we develop your solution.

Your waste calculation is optimised by:

Colour coding. Colours are deciphered both more exactly and much faster than written texts or verbal messages. Therefore, proactive use of our colour-coded slats will be instrumental in minimising the time your employees spend in the storage facility. For example, using red shelves for products with critical best-before dates will promote getting them sold rather than discarded.

Accessibility and overview

Our solutions are created to fulfil a powerful wish to maximise product accessibility for your employees – and our many shelving solutions make it possible to create perfect overview of the general status of your storage facility to ensure that nothing is forgotten.

Before: very difficult FIFO

After: fast and reliable FIFO

We are proud to associate our name to this

Tonon has been a market player since 1946, and we are currently run by the third generation of the Tonon family in the Italian city of Turin.

Since its early beginnings with roller rails for sides of meat, things have only progressed. Today, Tonon is represented almost all over the world, and Eric and Luca give fitting top priority to quality as could be expected seeing that their family name is synonymous with the trademark.

Tonon's wide area of distribution is also reflected in our list of customer references, which feature a wide range of distinguished companies. We do our best to ensure that they stay on there, just as we do our best to accommodate every new customer, large and small alike. When working as a family, there is a general rule to never leave anyone in the lurch.

Only the best
will do

Tonon products are made of materials that have been carefully selected to meet all the requirements we make to be able to deliver the highest quality possible. Only by doing this can we ensure that our solutions will meet all expectations – particularly the many regulatory requirements.

This means that all Tonon profiles are made of nothing but anodised aluminium.

Aluminium is the only option that can live up to being durable, easy to clean and, not least, rust-proof.

For these reasons, Tonon has also chosen anodisation that is 20 micrometres thick.

The sum total of these features protects you against rust, breakage and wear.

Our plastic slats are made of High Density Polyethylene (PE-HD) for the same reasons: the high requirements we impose on quality.

This type of plastic ensures a long service life, high load-bearing capacity and cleaning tolerance. At the same time, this slat solution enables us to offer the unique colour-coding of your solution.

To Tonon, quality is inextricably linked to the durability of our products. We are pleased that our solutions still look new, even after many years of use.

**Tonon is 99.9%
recyclable from
packaging to
product**

Climate and the environment have been on the Tonon agenda for a long time now. We acknowledge our responsibility and the significance of environmental factors have for a growing segment of customers, both yours and ours.

Not only are statutory requirements being continually tightened to minimise the environmental impact, but in many instances, our customers have gone further than required by law and 'vote with their feet'. If they note that we do not take environmental issues seriously, they will take their business elsewhere.

Climate considerations apply throughout your organisation. Customer concerns no longer apply only to an individual product's packaging. This now includes both processing and handling along the way.

This is why our products and packaging are also processed so they can be recycled. Thus, Tonon is 99.9% recyclable from packaging to product.

We are proud of and stick to this.

A full-page background image of a lush green forest. A dirt path leads from the foreground into the distance, where it meets a small stream. Sunlight filters through the dense canopy of trees, creating a bright, airy atmosphere. The text "A clear conscience" is overlaid on the left side of the image, flanked by two horizontal white lines.

A clear conscience

How to do it

Here is a very small selection of the wide variety of solutions now in place all over the world. Every single one of them has been individually adapted – and yours will be, too.
